

Evaluation of the PhD thesis submitted by Petra Konvalinková

Petra presents a good thesis although more could be done and finalized in papers or at least manuscripts. But this can be said about any large-scale field study like this. I appreciate the combination of theoretical and practical implications of the results. detailed evaluation of the content is upon the referees. I would like to stress the nice graphics introducing each chapter which were drawn by Petra herself.

Finally, I am satisfied with the thesis and believe Petra will successfully pass through the procedure.
