**Supervision: Dr. Petr Šimek PhD.**

**Opponent: MUDr. Miroslav Verner**

Rating thesis:

Evaluation criterion	Degree evaluation						
	scale	A	B	C	D	E	F
	numeric expression	1	1,5	2	2,5	3	-
Topicality and complexity	X						
Formulation of goals and their level of fulfillment		X					
Appropriateness of the work breakdown	X						
Theoretical level of processing	X						
Methodological level of processing	X						
Range of literature		X					
Level of work with literature		X					
Bibliografic standards compliance	X						
Level of formal treatment	X						
Link the results of work on its content	X						
Own positions and assessments			X				
Application works in practice / teaching	X						
<b>Overall Rating thesis</b>	X						

A brief verbal assessments:

The author was chosen an interesting and timely topic for the thesis. It is arranged with a brief and factual introduction. The author deals with methodology and determination of sarkosine. Number of samples for the measurement is not high, but I appreciate the effort to guide the comparison of two instrumental procedures and two small groups of patients. I would definitely recommend to continue the work and focus on the larger group of patients. From my perspective I find the work very inspiring and useful.

I have minor complaint a list of literature, where I would welcome any links with full title, not only the source and site.

I recommend the work to defend and propose evaluated as excellent.

Questions for the author:

1. Are you going continue your work?
2. What are internal standards used in your work?

**Date:** 14.6.2011

Signature of the opponent's thesis: .Miroslav Verner

A handwritten signature in black ink, appearing to read 'Miroslav Verner', written in a cursive style.
