Reference for Andrea Eder

Andrea worked hard on her bachelor thesis in our laboratory. Considering the short time she had for her experiments she managed to do an impressive amount of work. She was dedicated to her project, she understood the tasks given in front of her and she was not afraid to ask questions or read in case something was unclear. She was a quick learner with dexterous hands, I wish all my other students can dissect wing discs in such amounts and quality as her. The time pressure and commuting problems did not allow her to fully extend the scope of techniques (I mean mainly the confocal imaging complementing her beautiful immunostaining experiments) but still she managed to open a lot of interesting questions for us to follow in this project.

I consider Andrea as an outstanding student and I certainly approve to pass her bachelor thesis with excellent evaluation.
