

Průběh obhajoby bakalářské práce:

The student and the commission were introduced. Mrs. Jefferova described the topic of her thesis and the theoretical background. Especially, the mechanism of Zn^{2+} was described in more detail together with the studied animal, Daphnia magna.

Next, the results were shown showing the effect of different strontium concentrations on Daphnia magna together with statistical analysis. The student answered a number of questions from the commission regarding the stability and persistence of strontium in nature, etc., etc.
