

Průběh obhajoby bakalářské práce:

Prof. Brückhoff welcome the student and the commission.  
The student introduced the problematics of the Emilian Anckleyi algae, their photosynthetic apparatus and chloroplasts. Then, the methods for analysis of isolation of proteins and complexes were described and also the composition of pigments in various complexes in low and high light algae.  
The supervisor and reviewer statement were read and the student answered the questions. Next the student answered questions by the commission on statistics and HPLC.
