

Průběh obhajoby bakalářské práce:

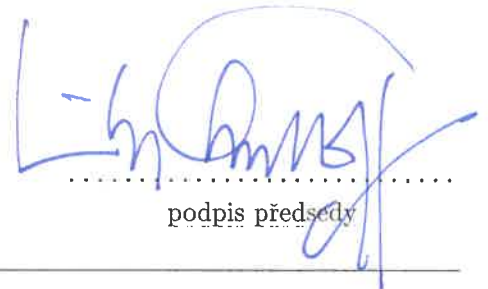

The student introduced the topic of tick feeding on mammalian hosts and the role of tick salivary proteins. Then, the work itself and the methods were described together with the results - cloning of several serpins, their production, purification and verification of their activity (for two serpins). After the supervisor's statement the reviewer read his statement and the student answered the questions. Then, the student answered questions from the commission on chimeric serpins and serpin structure.
