

Průběh obhajoby bakalářské práce:

The student introduced the aims of his topic, methods and results. The purifications of the various polyols were shown and their quantification. Supervisor ~~and reviewer~~ read here statement. The reviewer was not present and his statement was read. The student answered all the questions of the reviewer. Then he answered questions by the committee on polyols.

The discussion does not contain any discussion with published literature and no citations. This is a very important thing which should not be missing from scientifically oriented experimental work. However, the commission decided to allow the student to the degree.
