

**Průběh obhajoby bakalářské práce:**

Prof Grubisoff welcome the student, members of the commission and the audience. The student showed the theoretical background of the work, photosynthetic systems and their components, more specifically the pigments.

The student then presented her results, discussed them, and showed conclusions. The supervisor read his review, followed by the opponent. The student answered all the questions. Then, the student answered questions from the commission on general conclusions from the thesis, protection of algae against stress, quantitation of pigments and the use of an internet standard. All questions were answered satisfactorily.

Body: 110
