

**Průběh obhajoby diplomové práce:**

Prof. Grubhofer welcome the students members of the commission and guests. Dr. H. Langhamerová was not present.  
N. Hagleitner introduced the theoretical background of genetic manipulation of Borrelia and the published papers together with the aims of her work. Next, she presented her results for all the various aims and tests. The supervisor and the reviewer's reviews were read. The student next answered all the questions by the opponents to the satisfaction of the commission. Commission followed with questions, e.g. on the presence of lipopolysaccharide in the membrane/wall of Borrelia, experiments needed to be done before publishing a paper and on the differences between the various Borrelia strains.
