**Supervisor's Review for the Bachelor Thesis:
"Influence of Clustal W hyperparameters in multiple sequence
alignment for Align-RUDDER " by Marlene Ganz**

The motivation of this thesis is to analyse the effects of
hyperparameters in Clustal W, (a sequence alignment method), when
used together with a RL method. This is very interesting because
Clustal W was originally designed to work with biological sequences,
and the effects of hyperparameters in other domains are unknown.

The thesis is well structured and written. The introduction describes
clearly the motivation and the scope of the work. Results are presented
and discussed, with insightful plots and figures supporting the
discussion.

Overall, this is a great thesis and I can recommend accepting it for a
Bachelor title.

Sepp Hochreiter
