To whom it may concern,

My name is Petr Konvalina, who is head of Department of Agroecosystems, Faculty of Agriculture, University of South Bohemia in České Budějovice. I am writing to recommend Tran Dang Khoa, a Ph.D. student of our department to defend his thesis. I have worked with Khoa since 2016. During that time, I received that he is friendly with my colleagues. Furthermore, he did well implementations of our department. Khoa provided the essential information in organic production for students in some courses within Organic Plant production subject and maintaining a positive classroom environment. Also, he helped connection student foreigners and gave recommends for them when they studied in our department.

Tran Dang Khoa was active in writing and submitting manuscripts. During working process at our department, he published as author or co-author three papers with impact factor, some presentations at international conferences and he help us with two book chapters.

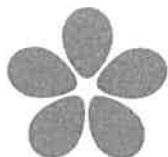

After completing his Ph.D. study, he will go back to continue to work at Hue University of Agriculture and Forestry. I wish he will implement into his academic career with much knowledge that he studied at our department.

Best regards,

doc. Ing. Petr Konvalina, Ph.D.

Head of Department of Agroecosystems

To whom it may concern,

It is with great pleasure I write this letter in support of Khoa Dang Tran. I have had the opportunity to work closely with Khoa from May 2016 until now. During that time, he took part two conferences in Czech Republic, one in Indonesia, and one in Romania. Also, he published four articles in these conferences, and he joined three internship trips in Austria and New Zealand to expand his knowledge in Organic Agriculture, Permaculture, and statistic data processing skill.

Regarding his experiments, he conducted two experiments in the different areas with nine wheat varieties. What is more, he is hard-working in the laboratory for analyzing the wheat quality with many indexes such as protein content, gluten index falling number, rheological properties on Mixolab II. analytic system, and etc.

With such the load of work, he is completely well done, and I strongly appreciate his job. Furthermore, suggestions of his thesis are very applicable and practical.

Please do not hesitate to be in touch if you have any further questions.

Best regards,

doc. Ing. Petr Konvalina, Ph.D.

Ph.D. student supervisor
