Name and Type of Study Programme	Regional and European Project Management / Navazující
Faculty / Department	Ekonomická fakulta / KRM
Supervisor	Fetscher Doris, prof. Dr.
Reviewer	doc. Dr. Ing. Dagmar Skodova Parmova

Thesis evaluation

1. Importance and difficulty of the topic 1.0

Note: The chosen topic is highly important for the recent development policies based on a particular example from Germany - Upper Rhine Region.

2. Logical structure of the thesis 1.0

Note: The theses are conducted in a logical way and the used chapters respond to standard rules.

3. Fulfillment of objectives 2.5

Note: The objectives of the theses are not exactly set. This missing step of setting goals before choosing adequate methods is the biggest mistake of these theses.

4. Methodological approach 1.0

Note: The used qualitative method is well described and is based on the chosen sample of interviews.

5. Assessment of theoretical and/or practical contribution of the thesis 1.5

Note: The theses might be a base for further wider research in the chosen region, because the interviews of only 4 persons from one place are limiting the results.

6. Handling of literature 1.0

Note: The used literature is suitable for the topic as well as for the methodology. It is also adequate for the discussion chapter.

7. Formal aspects 1.0

Note: The work is very well done according to the formal aspects.

Conclusion

Thesis evaluation (note): **excellent**

I recommend the thesis for defence: **YES**

Questions and comments

Critical comments and overall contributions, total value of the thesis

The theses are very interesting in their results and they can become a supporting document for the new programming period when creating new priorities and goals for Interreg projects.

Questions and topics for discussion before the commission

How would you measure the invented indicator of following cooperations? In time or in intensiveness.
