

Průběh obhajoby bakalářské práce:

Prof. Grubhofer welcome the student and the members of the commission. The student, Yifan Mayr, introduced the theoretical background of the studied topic, neurodegenerative diseases in general. Next, proteases and protease inhibitors were described, especially the ones related to Alzheimer's disease. The methods used in the thesis were shortly described, followed by the results. The conclusions were also presented.

The supervisor presented his review on the student and her work. Dr. Dittler also presented her review followed by questions and comments which were answered by the student. The student also answered the questions from the commission and the audience on the selection of the inhibitors, cell growth time etc.
