Questions and comments

Critical comments and overall contributions, total value of the thesis

The work deals with the comparison of seven open source software for e-commerce. The text is quite fine. The author briefly deals with the platforms in which the software is programmed (PHP) and the database for data storage (MySQL). At the end of the thesis, suitable software is recommended.

The work lacks greater experience with software, its adaptation to current conditions. The sources used are also insufficient, lacking up-to-date.
