

Průběh obhajoby bakalářské práce:

The head of the commission, Prof. Grubhoffer, welcome the student, members of the commission, and the audience. The student introduced the theoretical background of the thesis and the studied organism, Trypanosoma. The studied processes were also described, followed by the results on the localization of the studied molecules in the dividing Trypanosoma. The results on Ratti and phenotypes were also shown.

The supervisor described her views on the student and his work, followed by the reviewer. The student answered also the answers of the commission.
