

Supervisors report for Daniel Gstöttenmayr for Bachelor's degree dissertation

Daniel conducted a literature review for his Bachelor's degree dissertation entitled, 'DNA separation by capillary electrophoresis: A literature overview' under my supervision, albeit at arms length and via e-mail contact only. In fact this is the first time today that I have met him in person. Although technically under my supervision, I think that it would be misleading to state that I needed to provide Daniel with too much direction. When he initially contacted me he had already a well-formed plan as to the structure of his dissertation, that I broadly accepted. With the minimum of hassle he then proceeded to follow this plan over the next 6 weeks and presented me with a first draft in December. I considered this draft was of a high standard and that it demonstrated to me that Daniel had a very good understanding of the principles of capillary electrophoresis. I did suggest some minor adjustments to the text, some linguistic, and was satisfied with his final draft. I have found Daniel to be very courteous and polite in my e-mail correspondences with him. Furthermore he has responded positively to any suggestions that I made to him. In overall conclusion, I would recommend Daniel successful candidature to the examining committee.

A handwritten signature in black ink, appearing to read 'Bruce', with a stylized, cursive script.
